

SUPPORTED DIGITAL ASSETS

Last Update: June 24, 2026

Novawave is a Digital Asset Service Provider (PSAD) registered with the National Commission of Digital Assets (CNAD) under Registration No. PSAD-0079 (20 April 2026), and a Bitcoin Service Provider (PSB) registered under the Bitcoin Law, Registration Code 6697f7c29c3ab49e3172b9f8 (29 July 2024).

Novawave provides access to a carefully selected range of digital assets through the monesy.io platform and other services. For each supported digital asset, the following information shall be available to clients on our website monesy.io and user dashboard (where applicable). All information shall be regularly and reasonably updated.

Supported Digital Assets and Their Characteristics

Digital Asset	Sym-bol	Current Networks	Interchange-ability with other digital assets	Benefits of a Digital Asset
Ethereum	ETH	Ethereum Network (ERC-20)	USDT, USDC, exchange to fiat currencies	Serves as a core infrastructure asset for executing transactions across the Ethereum network, enabling integration with liquidity providers, DeFi-based rails, and ERC-20 token operations. Its liquidity and mass adoption ensure high demand and efficient settlements for Novawave's Services.
USD Tether	USDT	Multiple networks	ETH, USDT, USDC, TRX, exchange to fiat currencies	Provides a highly liquid and globally recognized U.S.-dollar-pegged stablecoin, allowing Novawave to minimize volatility risk in exchange and payment operations. Facilitates instant crypto-fiat conversions and remittance processing for both retail and corporate clients. Its liquidity and mass adoption ensure high demand and efficient settlements for Novawave's Services.
USD Coin	USDC	Multiple networks	ETH, USDT, USDC, SOL, TRX, exchange to fiat currencies	Offers regulatory transparency and strong counterparty credibility through its issuer (Circle). Used to support compliance-oriented transactions and stable settlements for B2B payment flows, reducing exposure to market fluctuations and enhancing trust with institutional clients. Its liquidity and mass adoption ensure high demand and efficient settlements for Novawave's Services.
Solana	SOL	Solana Network	USDC, exchange to fiat currencies	Enables high-speed, low-fee processing of transactions, improving scalability and user experience. Used primarily to optimize transaction

				costs and increase efficiency in micro-payment and merchant integrations. Its liquidity and mass adoption ensure high demand and efficient settlements for Novawave's Services.
Tron	TRX	Tron Network (TRC-20)	USDT, USDC, exchange to fiat currencies	Supports low-cost and high-throughput transfers, particularly advantageous for cross-border retail and remittance transactions in Latin America. Its compatibility with USDT TRC-20 allows Novawave to deliver affordable and fast settlements for clients using limited-bandwidth environments. Its liquidity and mass adoption ensure high demand and efficient settlements for Novawave's Services.
Bitcoin	BTC	Bitcoin Network (BRC-20 / Native)	Exchange to fiat currencies	Supports highly secure, decentralized, and globally recognized value transfers, serving as the ultimate digital store of value and a robust layer for large-scale settlements. Its integration with the Lightning Network allows Novawave to offer scalable, low-fee microtransactions alongside traditional high-value on-chain transfers. Its unmatched liquidity, institutional adoption, and status as the crypto market benchmark ensure maximum trust, stability, and resilient settlements for Novawave's Services.
